 - Under Supervision of **Dr. Vahid Babaei** and with Collaboration of **Prof. Julian Panetta** at University of California, Davis, USA.
 - Physics-based simulation of stiffness of the obtained design
 - Generative continuous design via a single fixed mesh through controlling the frequencies
 - This project which was defined as my master's thesis, has been published and presented in ACM Symposium on Computational Fabrication 2021
 - I spent 1500+ hours until the submission of concluding paper

WORK EXPERIENCE

- **Full-time Data Engineering and Data Science Specialist** Karaj, Iran
 - *Specializing in Advanced AI Solutions for Business Optimization* *April 2022 - December 2023*
 - *Nahal Gasht*
 - The Problem: **Implemented an AI-driven solution to address the challenge of prioritizing customers applications in the tourism sector.**
 - Impact: Decreased personnel error by 10%, **mitigating potential losses equivalent to 5.5 times my annual salary.** Also, **awarded for dedication and leadership**, leading to two promotions and a 70% salary increase within one year. Moreover, **I established myself as the primary resource for onboarding and training** new team members, receiving praise for my ability to simplify fundamental concepts.
 - Developed a comprehensive screening process automation from customer communication to application prioritization, filtering calls based on the complexity of inquiries, **reducing manual workload by 40%.**
 - Oversaw the development of a proprietary data extraction and preprocessing pipeline, resulting in a **35% reduction in poor-quality data.**
 - Deployed a machine learning model (XGBoost) coupled with Explainable AI techniques to prioritize applications and provide transparent reasoning for each decision.
 - This experience demonstrates my ability to leverage AI technologies to optimize decision-making processes, drive significant business outcomes, and collaborate effectively with stakeholders from various backgrounds.
